

ECGrid® Interconnect Tracking Service

Service Brief:

ECGrid® Tracking for VAN Interconnect Traffic!

ECGrid Delivers:

Real-time Tracking: Like a FedEx® shipment, ECGrid tracks all interchanges from the moment they enter the system, along every step across the network, and through delivery confirmation. All logs are kept for seven years in archives.

Proactive Monitoring: ECGrid follows all interchanges through the anticipated route. Any anomalies are instantly reported to all involved parties for quick issue resolution.

Interactive Reporting: Various interactive reports allow Trading Partners and VANs to immediately determine the status of any interchange or mailbag on the infrastructure.

Third-Party Accountability: With ECGrid, the VANs are our customers. In traditional Interconnects, the VANs are competitors. Our mission is to get the Interchanges through the Interconnects, period. When any problems arise, we are accountable to the VANs and to their customers.

ECGrid is a new service, available from your VAN, that dramatically improves EDI Interconnect operations.

- Improved Interconnect reliability
- Comprehensive tracking
- Interactive reporting
- Low-cost service

Immediate issue resolution is finally here for Interconnects. Troubleshooting and delivery status is available through easy to use, web-based reports. Proactive monitoring generates notification alerts for potential or actual problems.

At last... VAN Interconnect Tracking

For only pennies per transaction...

The screenshot shows a web browser window displaying the ECGrid Mailbag Status Monitor Page. The page title is "ECGridSM Mailbag Status Monitor Page". It features a table with columns: MailbagID, Date, File Name, Control, Bytes, Mode, Status, Minutes, and Date-Time (UTC). The table contains multiple rows of transaction data, including MailbagID, Date, File Name, Control, Bytes, Mode, Status, Minutes, and Date-Time (UTC).

ECGrid mailbag status monitor page instantly displays up to the minute routing status for Interconnects

Technology and Security

ECGrid is a mission critical Value Added Interconnect Network for VANs. Our architecture and protocols have been extensively examined by the largest VANs, and have been found to be technically superior to any other system available.

ECGrid utilizes a distributed processing architecture, which eliminates single points of failure, maximizes scalability, and promotes EDI industry growth.

Security extends beyond current Interconnect implementations, utilizing encryption over a secure, 128-bit IPsec VPN for 100% of traffic.

ECGrid®: The Interconnect Problem Solved For Trading Partners

Why do Interconnect Transactions get lost?

- VANs are competitors.
- Interconnects are based on agreements between competitors.
- No two Interconnects are implemented alike; each one is a custom connection.

Don't get caught in the middle. Get ECGrid.

The Interconnect Tracking Service

After recognizing the frustration incurred by VANs and Trading Partners alike in establishing, supporting and tracking Interconnect traffic, Loren Data Corp. built the first standardized VAN Interconnect infrastructure three years ago: ECGrid.

ECGrid is a service, currently available to all VANs, that substantially improves Interconnect reliability, and includes real-time tracking, proactive monitoring, interactive reporting, and third-party accountability.

Features

- Real time tracking for all Interconnect traffic
- Proactive monitoring and alerts
- Interactive reporting
- Centralized technical support

Improved Interconnect Service

Imagine if your local phone service operated like VAN Interconnects:

*I'm sorry, we don't connect with US West. Your call cannot go through
I'm sorry, it is no longer "strategic" for us to connect with Bell Atlantic
I'm sorry, we have an outage with Ameritec, it is their fault
I'm sorry, we keep dropping calls to Pacific Bell, it is their fault
I'm sorry, all the calls to Verizon are garbled, it is their fault*

Interconnects can be as predictable as long distance phone calls. ECGrid allows all VANs to reliably Interconnect with every other VAN, allowing all your documents to be consistently delivered to all your trading partners.

It's your data, it's your Trading Partner, and it's your money. You deserve better. Now you can get it. **ECGrid: The Interconnect Tracking Service.**
